

A low-magnification histological section of a brain slice, stained with hematoxylin and eosin (H&E). The section shows a large, roughly circular area of brain tissue. The outer edge is irregular and stained a deep pink. The interior is a lighter pink with numerous small, dark purple dots representing nuclei. A prominent, dark, curved structure is visible in the upper right quadrant. A thin, dark line, possibly a needle or suture, is visible in the lower left quadrant. The overall texture is granular.
